Lemont Pa.
March 28, 1951

College Twp. Supervisors met on above date. All, Williams, Walters, and Lee were present. As a group they viewed Township route 380. Harry Houts made complaint about Stuble farming too close and across the road, so that ditches were closed and water was washing the road. The Supervisors agreed to set stakes at an over all width of twenty feet and notify Stuble that he dare not farm within this area or he would be charged for damage done.

Township route 359 was viewed concerning proposed grading, draining, and widening, to begin at the Lemont Methodist Church and extending up the mountain to the end of the road. New culvert pipe is to be placed above and near the property of the Lemont Water Co., and at a point above the Methodist Church. Necessary replacement or repair is to be made to the culvert on the turn at the reservoir of Lemont Water Co. The large culvert about one third of the way up is to be extended on the upper end. Walters is to secure the hire of a dozer or grader as necessary and be in charge of the work, arranging and doing the work as he sees fit and according to discussion of the Supervisors.

A request was received from John I. Hardy for additional culvert pipe over his driveway west of Lemont reservoir. He claimed damages as a result of work done at the Dale Cemetery during 1950. He accepted an offer to settle by the Supervisors placing pipe over his driveway. A piece of pipe was placed. He wants forty feet of pipe. Supervisors agreed to make another effort to find the right-of-way to the cemetery. This being done to refuse him more pipe unless he pays for it.

(over)

A petition was received from property owners in the community of Bathgate Springs for the Township to take over the road for maintenance. The matter was discussed favorably but was tabled until the Supervisors can check the road for shoulders, drainage, and construction. If these can be worked out satisfactorily the secretary is to have an ordinance prepared for a meeting around June 1, 1951.

Construction and improvements for this year were formally approved as follows:

(1) Shape, drain, and build CP-2 top on route 357 a distance of about 385 feet from the eastern end;

(2) Resurface route 589;

(3) Shape, drain and build CP-2 top on route 559 from intersection with route 359 southward one block to corner where road turns about 90° east.

Secretary is to plan and make arrangements to do this work about the middle of June. County aid and state forms were signed accordingly. The remainder of route 559 is to be widened for two way traffic. Work to be in charge of Walters.

Secretary is to notify Rebekah Gibbons that the road through her lot development in Houserville must be cared for as follows to meet township approval; mud from work during construction must be cleaned before application of oil, four foot shoulders provided, and road raised and drained near end back of Frank Hoots property.

A metal filing cabinet is to be bought for Supervisor's use, and placed in the office at the School House. Correspondence, bills, and such things except contracts, agreements, and such things older than seven years are to be destroyed, on the advice of R. Paul Campbell.

Elwood G. Williams
